HONMA TW-W

One of the world's most expensive golf brands has now released a new player's wedge. Actually, two of them.

Introducing the TW-747 (TW to denote Tour World, its better-player series) I-sole and C-sole wedges configured to provide accuracy from approaches within the 100-metre range, as well as spin control around the greens.

The I-sole version offers a thinner face for lower centre of gravity hits and ideal turf interaction that suppresses spin so the ball can stop where it is aimed at.

Where spin is desired, however, is around the green and the C-sole inspires confidence with feedback from Japanese professional Hideto Tanihara.

With a thicker design on the upper portion of the face, the C-sole offers a mid-to-high centre of gravity that when struck, will let the club glide across the ground, and thus providing more spin for shot-stopping reaction.

The I-sole is available in 48, 50 and 52-degree loft options while the C-sole offers 56, 58 and 60-degree lofts at Honma Golf Singapore at #03-03A Wheelock Place.

PING GLIDE FORGED

Made of 8620 carbon steel, PING's first fully forged wedge in years offers incredible feel and forgiveness due to the tungsten toe weight that is added in this blade-style product.

Patented, precision-milled, wheel-cut grooves, first introduced in the Glide 2.0, gives a sharper edge radius, which increases interaction with the ball at impact, creating more friction for improved spin and trajectory control.

It has a sole design with a rounded lead edge and more heel-toe camber to allow for creativity around the greens and a gooseneck-tapered hosel to ensure a smooth transition through grass and sand.

Available in four custom graphic, three stamping and 12 paint-fill options at PING Golf outlets in Orchid Country Club Driving Range and Champions Golf at Fairways Drive.

CLEVELAND RTX4

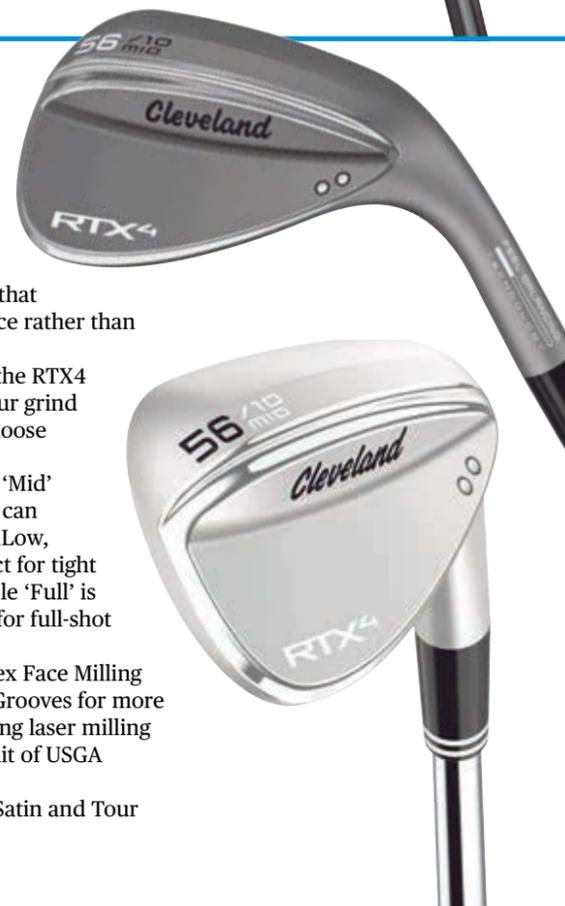

Over 40 years, Cleveland has built wedges to suit every level of golfer. This time, with the fourth generation of the RTX, it has engineered a tour-level club that focuses on blade-like performance rather than cavity-back safety.

A true wedge player's dream, the RTX4 offers tour-preferred shaping, four grind offerings and three finishes to choose from.

Simply termed 'XLow', 'Low', 'Mid' and 'Full', these four sole grinds can produce all kinds of shots. The XLow, with the lowest bounce, is perfect for tight lies and extreme open faces, while 'Full' is a traditional mid-bounce model for full-shot performance.

On the face, an aggressive Rotex Face Milling turns out the sharpest Tour Zip Grooves for more stopping power, and finished using laser milling to roughen up the face to the limit of USGA regulations.

Available in Tour Satin, Black Satin and Tour Raw at all Pan-West outlets.

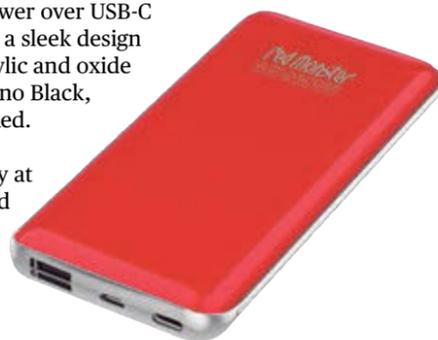

RED MONSTER ULTRA SLIM RAZOR

Rated as one of the world's thinnest power delivery power bank, this flagship 2019 model is, as its name suggests, ultra slim.

At merely 138mm by 68mm by 12.99mm, it has an output of 10,000mAh to power a variety of devices from smartphones to tablets, gaming consoles and laptops.

Using Power Delivery (PD) technology that supports fast charging at high power over USB-C connection, it comes in a sleek design with quality PMMA acrylic and oxide finish in Matt Black, Piano Black, Piano Gold and Piano Red.

It will be available in January 2019 exclusively at all Challenger stores and comes with one-year warranty and product liability insurance.

MARUMAN RENAMED AS MAJESTY WITH MST GOLF AS KEY PARTNER

MST Golf is now the official distributor for the Majesty brand of golf equipment from Japan. When the products arrive, targeted at next February, they will distribute it across Singapore, Malaysia and Indonesia.

Formerly known as Maruman, Majesty's rebranding is in line with their focus towards manufacturing premium golf clubs.

In Southeast Asia, they will launch two series, Royal and Prestigio. The Prestigio is a high-end, high COR range

built for the senior golfer.

While remaining within the legal USGA limits, it utilises a lightweight clubhead and proprietary shaft built in collaboration with Mitsubishi Chemical, to help carry the extra yards.

The Royal range will appeal to a younger, but still mature set. And while similarly built, it is slightly heavier and comes with stiffer shaft options. The Royal range is also used by some Japan LPGA professionals.
